

The **centra rifle team**: We support top shooters Sonja Pfeilschifter, Barbara Lechner, Maik Eckhardt, Claus Hildebrand and Jozef Gönci. These experts are also the first to try out and critically evaluate any of our new products.

centra

Under one (tent) roof: **centra** and MEC have for some years operated a combined service station at major events, such as the German Championships in Munich. Additional dates for the **centra-MEC** station are the IWK in Munich (end of January) the IWA in Nuremberg (March) and the Munich World Cup (beginning of June).

If you want to visit **centra** in Rheinfelden-Herten, you will find us in the deep south, about 20 kilometres from Basel. Here we are happy to display and discuss our product range and give our advice on any particular questions relating to sight systems or any other aspects of target rifle shooting. If you want to drop by, please just give us a call first.

A further contact medium is the internet. Look for us under **www.centra-visier.de** and you will find our products on offer.

A glossary explains many of the basic terms relating to the theme of "sighting". Internal matters, such as current job vacancies, are also publicised here.

In its role as fine mechanical manufacturer with half a century of experience in the construction, the manufacturing and assembly of the most sensitive optical equipment, **centra** possesses an unusually high technical potential. This is especially true of our highly specialised machine-park and our specialised manufacturing knowledge; but above all in our employee base, their motivation and applied skills. **Centra** is therefore increasingly involved with external projects, when innovative constructions and especial precision are called for. Many new ideas crop up in the practical course of the target shooting sports, and in this area the most promising prototypes are tested for their effectiveness in daily usage. Through Johann Zähringer himself, together with the **centra-rifle team**, our immediate contact to the current developments in the top echelons is taken care of. Because nothing changes so fast as yesterday's records.
